WORKING PAPER

22 March 1973

STATINTL

NOTE FOR:

1. Would you get from our friends in TSG and IEG a few paragraphs that would summarize and give a few examples of the improvements in technology that support the PI today compared to the early 1960's. I feel this would make a good section in the guidance paper.

2. This would include not only improved mensuration capabilities but all the technical ways that the photo-scientist fits into the picture to manipulate the image.
